- Replacement of internal tubing and filters
- Testing and calibration of air flow rate with replacement of needed components
- Evaluation and/or replacement of main air supply line filter
- Repair or replacement of any components found to be leaking air

Cavitron® Ultrasonic Inserts

Each Cavitron Package includes (1) Slimline 10S FitGrip insert. Choose (3) additional inserts from the options below!

Slimline®

Powerline™

When selecting inserts, consider the following:

Type of deposit

Inserts are uniquely made to handle different levels of deposit. Consider the force needed to remove the deposits.

Thicker inserts with larger tips are designed for heavier levels of calculus.

Thinner inserts with slim, adaptable tips are designed for the removal of light to moderate deposits or biofilm.

Treatment site

Select inserts that are specially designed for the type of tooth anatomy you will be working on.

Straight inserts are designed for flat tooth anatomy.

Curved inserts are designed to give you the best results in furcations and concavities.
